

***Recyclables may be mixed***

Waste Management was the first major solid waste company to utilize residential single-stream recycling which allows residents to mix recyclable paper, plastic and glass all in one bin! Residential single stream programs have greatly increased the recycling rates, recovering as much as three times the amount of recyclable materials. The process is made possible through the use of various mechanized screens and optical sorting technologies used in many of Waste Management's Material Recovery Facilities (MRFs) or recycling plants.

***Recycling collection in the Village:***

Recycling occurs every other week on the same day as your trash pickup-- Monday or Tuesday (depending on your service day). If your recycling pickup day falls on or after a WM observed holiday, revise the schedule as you would for your trash pickup. Be sure to have your recyclables on the curb no later 7 AM but not earlier than 5 AM. Recycling cannot be put out the night before.

***Where to get CPV recycle containers:***

Residents may pick up the green WM recycle bins at the CPHA building during operating hours (M-F, 8 am to 5 pm). Please check in at reception to receive up to two recycling bins for your home.

***What goes in the recycle bins:***

More household recyclables than ever are now accepted in Waste Management's recycling program:

- Aluminum & Steel: Aluminum Cans, Pie Tins, Aluminum Foil, Steel/Tin Cans, empty Aerosol Cans. Containers should be rinsed and free of debris.
- Glass: Food and beverage grade glass only. Please remove lids and rinse containers.
- Paper: Magazines · Office Paper · Paperboard · Newspapers · Junk Mail · Cardboard · Phone Books · Brown Paper Bags, Place shredded paper into a brown paper bag, staple it closed and place into your recycle container. Cut and flatten cardboard/paperboard into 2'x2' squares.
- Plastic: Plastic bottles with "bottleneck" openings, such as milk, pop, detergent, or shampoo bottles.

***Items that are not accepted in the recycle bins:***

Ceramics, light bulbs, plate glass· Containers that have held hazardous materials like motor oil· Plastic bags· Wide-mouth plastics such as butter tubs or yogurt containers· Food contaminated items or household garbage.
